

DELFOi

TRANSPARENCY FOR GLOBAL AND LOCAL OPERATIONS.

DELFOi PLANNER®

DELFOI PLANNER is a user-friendly and visual production planning and control solution to optimize your production. Delfoi Planner dramatically improves planning transparency and delivery reliability, shortens production lead times and minimizes work in progress.

Customer case: Decreased lead time by 50 % • Increased delivery accuracy from 75 % to 95 % • Decreased planning time by 70 %

Increased visibility of operations

Delfoi's Advanced Planning and Scheduling (APS) solution provides visibility for complex operations. All interest groups have instant access to the scheduling software via internet no matter where they are located. Thanks to its scalability the same software is well suited also for small job shops. The easy-to-use software reduces planning time from several hours to just few minutes.

Delfoi Planner includes applications for demand capacity planning, finite scheduling, space reservation, project planning, production shop floor control and personnel shift planning. It can be used for scheduling of design, production and service operations.

APS for production planning and scheduling

A production planner can either download orders from the ERP system or create them with the Delfoi Planner application. Orders are scheduled using automatic scheduling and the drag-and-drop functions in the Gantt chart. Scheduled plans can be visually rechecked e.g. for material shortages, delays and progress of work. The software has number of options for timing orders with backward and forward scheduling. Changing the schedule is fast and easy. Planner can re-schedule a single operation, selected production orders or execute full optimization. Concurrent planners can work simultaneously with the plan. Capacity limited finite scheduling ensures that resources and timetables are aligned.

MES for Production control

Delfoi Planner MES offers a simplified shop-floor user interface for confirming and reporting operations. Work instructions, quantity and other production notes can be viewed and reported through the digital work orders. Delfoi's shop floor interface enables paperless production control and monitoring. The application can be used from mobile and tablet platforms.

Delfoi Planner in brief

Web-based solution

The web-based solution ensures easy access, transparency of planning and lower software life cycle costs. Delfoi Planner can be provided from Delfoi cloud with TSL/SSL-security, back-up and replication services. Delfoi Planner SaaS makes implementation, training and testing cost efficient, easy and fast.

Best user interface in the market

Delfoi Planner is considered a most user friendly and easy to use solution in the market. The system is very intuitive to use. and the set-up and configuration is very fast and easy for advanced admin users.

Integrated APS and MES in one solution

Delfoi Planner integrates advanced planning, advanced scheduling, project planning and shop floor user interface seamlessly in one solution. This enables real-time transparency for planning and execution.

Integrability

Delfoi Planner has an open REST(.json) -interface for partners, integrators and advanced customers.
